## **ABSTRACT**

An organic electroluminescent element comprising a cathode and an anode having therebetween at least one organic compound layer, wherein one of the organic compound layer comprises a polymer having a repeat unit represented by Formula (1) (wherein  $Ar_1$  represents an arylene group which may have a substituent or a heteroarylene group having not more than two heteroatoms, which may have a substituent; and  $L_1$  represents a divalent linkage group selected from a prescribed group; and  $n_1$  represents an integer of not less than two).

Formula (1)
